

VICTORY HEATERS CARE AND MAINTENANCE GUIDE

Product Information

These heaters are used on our Corradi roof systems, Titan Pergolas and large umbrellas.

They use shortwave infrared to produce the heat required. Shortwave IR is an ideal solution for patio heaters, as it provides the heat required without being affected by breezes. This is because infrared is not a convection heating system like gas heaters.

Infrared waves travel through the air to solid objects such as furniture and people. These waves are then absorbed, creating the feeling of heat.

General maintenance

Clean the lamp gently using a damp microfibre cloth.

DO NOT use detergent or cleaning fluids as they can cause damage to heater, the lamp coating & the surface of the reflector inside the unit.

DO NOT attempt to clean your heater or lamp whilst it is switched on, or even plugged in.

If you need to replace a lamp in your heater, you can buy spares from Showpiece Design and you can see how to fit them here:
