

assignment to concrete ground shell Typ T / TX

The dimension of the foundation may not fall short of the mass given below!

The inground sleeve of the 2-part ground shell should conclude shortly with the surface and up to the base plate are supported.

The location of the shell is to be chosen in such a way, that with open screen a distance from 20 cm is kept to buildings, other parasols or other objects.

With several parasols side by side we also recommend a distance of 20 cm in the open state.
